

Environmental Services

- ISO 17025 accredited LDAR programs
- Accurate and reliable measurements
- Advanced emission management software
- Reach environmental targets
- Comply with regulations
- Reduce carbon footprint
- Improve maintenance efficiency

This Makes Us Different

Dedicated and experienced team

With over 30 years of experience, our well trained and qualified specialists apply best available techniques.

Innovative player

Innovation and continuous improvement is key. We test emerging technologies and use state-of-the-art software platforms SFEMP and PRIMS.

Strategic partner

We go beyond performing measurements onsite. Our advisory services and cooperation with international regulators and policymakers testify to this.

Managing emissions is what we do

Delivering Environmental Services & Pipeline Management is our core business.

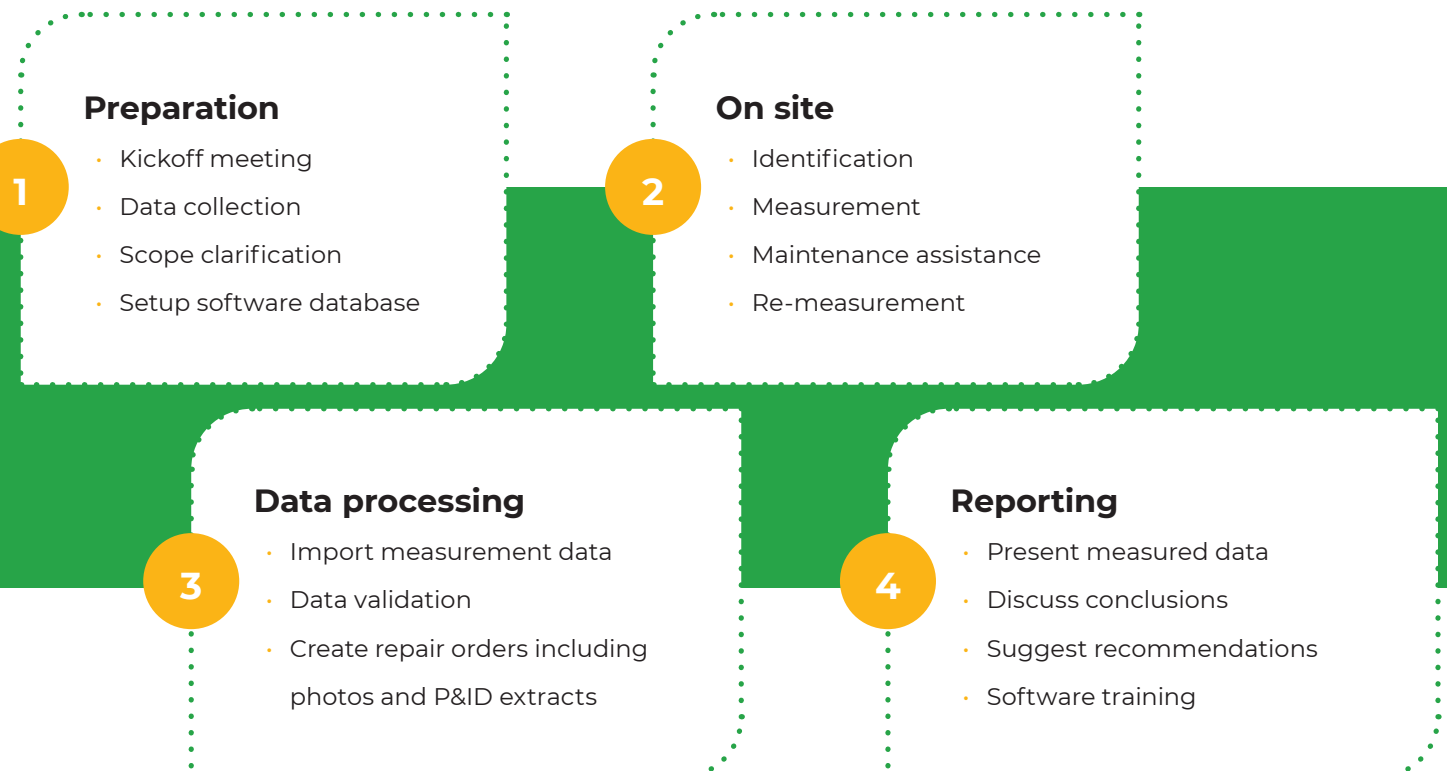

Reliable and accredited processes and methodologies

Intero - The Sniffers is a certified and laboratory accredited organization with ISO 9001, 14001 and SCC, and ISO 17025 612-TEST Belac and 389-TEST Israc.

Active globally

As a global solution provider, we are active in over 35 countries.

Our Approach

We are contributors to a better environment

Emission Monitoring

LDAR / Optical Gas Imaging

Report fugitive emissions and comply with legislation with our ISO 17025 accredited LDAR program. Or scan potentially leaking sources fast with Optical Gas Imaging.

Methane Emission Monitoring

Determine how much methane is emitted per asset across the entire supply chain for both intended and unintended emissions. Report detailed and aggregated emission data. Reach the OGMP Gold Standard or comply with the EU Methane Regulation.

Turnaround Acceleration Services

Guarantee fast and safe production startup during the full turnaround process. Identify critical components and save costs with our different measurement techniques.

Flare & Incomplete Combustion Efficiency

Emissions from flaring systems and combustion devices can be a major source of methane losses. Assess these systems to meet regulatory requirements.

Storage Tank Emission Management

Understand the emissions from your storage tank, enable fast repair activities and report credible and accurate emission figures. Comply with legislation.

Innovation

We keep a close eye on emerging technologies to monitor leaks to the atmosphere. Currently, we offer UAV drone inspections together with our partner, flare efficiency monitoring, continuous monitoring, and different methods to measure hydrogen.

Energy Savings

Vent and Flare Loss Monitoring

Achieve a fast ROI with our vent and flare loss monitoring service. Have your biggest leaks identified and repaired first to save costs and avoid production disruption.

Infrared Thermographic Surveys

Check the condition of your equipment with our thermographic surveys and reveal hidden problems early. Extend the lifespan of your infrastructure and save costs.

Steam Loss Monitoring

Reduce energy consumption and save costs by having your steam traps checked by our experts. Achieve an ROI of only 5 months.

Compressed Air and Vacuum Leak Detection

Reduce energy consumption by detecting internal and external leaks. Check inaccessible sources and lower maintenance costs.

Emission Solutions and Advisory

Emission Management Software SFEMP

Our SFEMP software is a cloud-based application to structure and manage your emission data coming from different emission types and according to required regulations.

Environmental Program Development

Looking for a structured and documented approach to reach your environmental goals on corporate level? We develop multi-year environmental programs.

Training for Emission Management

We offer a wide range of courses so your professionals stay up-to-date about effective emission management. From user training of our software application SFEMP to training in managing fugitive emissions or methane emissions.

Performance Benchmarking

Our benchmark capability reveals areas of improvement and confirms best-in-class practices. Compare your emission performance over different sites or with other peers in the industry.

Regulatory Advice

Based on our global experience and know-how of both international and local legislation, we help you fully understand and comply with new or updated regulations or standards.

Intero - The Sniffers

intero-integrity.com

We are the contributors to a better environment. You can sense the winds of change in the oil, gas, and chemical industries as they move through the energy transition.

As a key part of our company, Intero - The Sniffers combines global field emission measurements with expert knowledge and advice. With cloud-based SFEMP we enable significant reductions in emissions while driving your environmental ambitions forward.

Ever-evolving solutions
